

Omega Gaming

Omega Gaming (Malta) Ltd. is a uniquely positioned gaming technology, development, and services organization. Comprised of a team of executives and software engineers, that have been involved in shaping the on-line landscape with innovative gaming products and technologies since 1995.

Our strategy is to identify synergies, design solutions to maximize the benefits, and become dedicated long-term IT partners of our clients (operators and suppliers alike) in the gaming industry. To help our customers realize measurable goals by leveraging technology we utilize world class people, processes and infrastructure to bridge the gap between concepts and revenue.

A key differentiator for Omega Gaming leverages our industry experience and intellectual property (IP) to deliver the core management system (CORE) which includes a highly flexible front end / web portal, an open architecture for adding drop-in gaming products, a player services module, and a secure and fully managed transaction server for payment solutions. Omega CORE also facilitates integration with Jurisdictional Regulators, and full responsible gaming features. Additionally, Omega Gaming develops leading-edge games, gaming systems, and platforms for the regulated online gaming industry.

Omega CORE

Platform Fusion

At the core of any successful operation, lies the need to quickly and accurately disseminate information. Managing the flow of information, from multiple sources, and configuring to be business ready is a key factor. The foundation of all platform configurations at Omega Gaming is our Core Management System (Omega CORE), a leading-edge management, reporting, regulatory compliance and administration product. A modern online gaming system needs to incorporate multiple sophisticated products and provide a central back office function, so that the operator can deliver a seamlessly unified experience, for both the customer and system administrators.

Omega CORE is the essential backbone which allows this vision to be implemented. All Omega components are designed around the Core Management System and are available as fully integrated or stand-alone offerings.

Omega Gaming Portal

Unified Gaming System Management

Many operators have run a successful gaming business with a single provider's products, and a website that they have created and perfected over time. The issue they are running into when they want to offer another provider's games is how this works? How do customers get money from one system to another? How do they login with the same credentials? How do I manage customers and my business with 2, 3, 4 and more separate back-end systems?

The problem becomes very clear; how to integrate all of these 3rd party solutions into one customer focused, concise, professional, enterprise class gaming operation. This has been the focus of our work for the past decade. Utilizing the Omega CORE Management System, coupled with the Omega Gaming Portal, we offer a foundation for you to build your gaming business upon.

Omega Casino

This mature suite of games, game logic, and mathematical models carries an official Certification of RNG Evaluation. This establishes a solid foundation for the continued enhancement of next-generation games, as part of the Omega Gaming mission and strategy moving forward.

Game Fairness and Certification

Omega Gaming cares about complying with the world's more stringent regulatory requirements. As such, our software carries an official Certification of RNG Evaluation conducted by Technical System Testing (TST). As an internationally recognized Accredited Testing Facility (ATF), Technical Systems Testing (TST) offers a full range of testing and consultation services for Terrestrial (traditional / land-based) and Interactive-based gaming, wagering, to ensure that gaming operates in a manner that is fair, secure and auditable. TST laboratories provide fully independent and impartial testing, consultation and certifications for industry Operators and Suppliers and Regulators. It is our belief that total impartiality of a testing facility is paramount in ensuring an unbiased evaluation. TST analyze system software and equipment, and the environments in which they operate, against manufacturer's specifications, legislative and regulatory requirements, and to generally accepted industry standards.
