

## CASE SCENARIO: WIN2DAY INTERNATIONAL

Win2day.at is the multichannel gaming platform run jointly by Austrian Lotteries and Casinos Austria AG. Accessible via PC or mobile phone, this highly popular site was launched in February 2003 to replace the existing WebClub.at, which had already been online since 1998. win2day.at offers players a choice of traditional Austrian lottery games and a selection of different online casino games.

### Going International

Win2day is expanding its business beyond Austria and will operate one of the very restricted online licences in the newly regulated Belgian market. With a requirement to add the best of breed Casino Games as well as Bingo, Mobile, Sportsbook and Poker; win2day required a centralized gaming management system as well as an architecture that integrated with the Belgian Gaming Commission's regulatory framework.

### Choosing Partners

Win2day chose Omega's CORE Management System as the centralized back office platform, providing payment solutions, player management, regulatory reporting, responsible gaming and horizontal bonus management.

Win2day also chose the Omega Gaming Portal to present the multi-channel, multi-vendor solution that will go live in February 2012.

As part of this solution Omega Gaming has been one of the first providers to directly interface with the Belgian Gaming Commission's e-Game Web Services.
